

Millions of documents are created daily by different people, with different naming conventions and different indexing methods. That's why most organizations struggle with organization. An ECM system can help, but it's not always enough. Automate the process with the Constellation™ Processing Cloud.

CONSTELLATION™ PROCESSING CLOUD

A solution by /ARRAY

INCREASES SCALE AND QUALITY of document imaging.

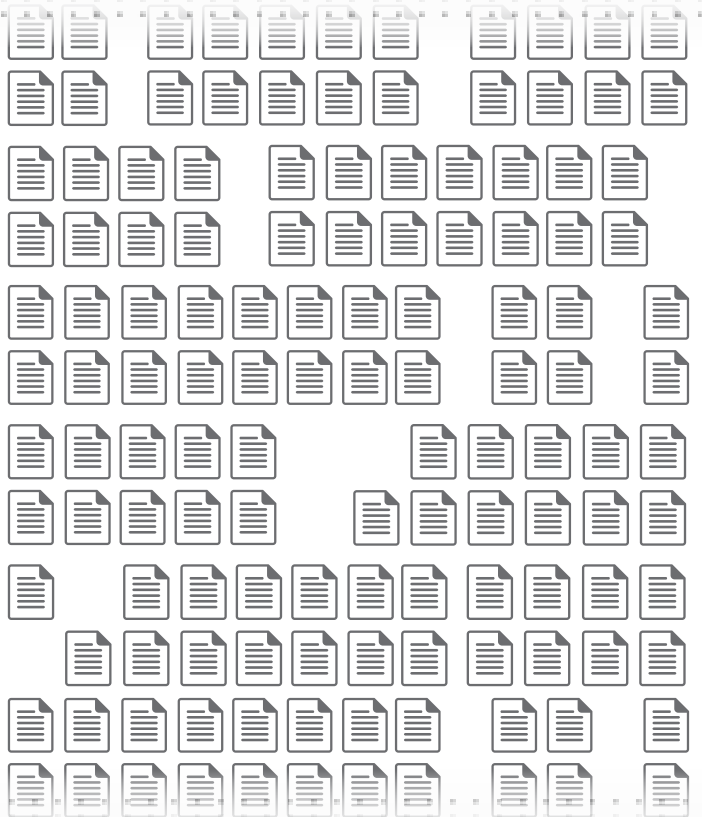

REDUCES labor costs.

Allows **MORE ACUTE** data mining.

WORKS WITH AND IMPROVES functionality of ECM systems.

Delivers **BETTER** business intelligence.

MINIMIZES risk.

GROUPING ANALYSIS

Constellation's patented, comparative analysis algorithm automatically groups identical documents based on textual patterns.

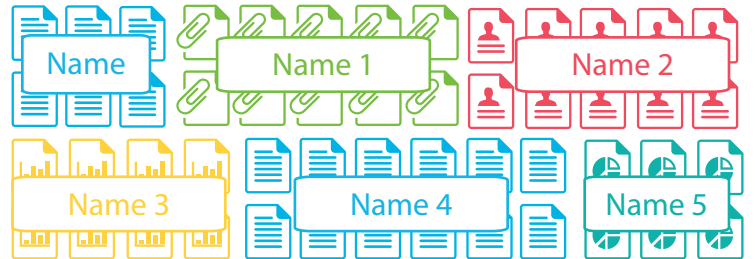

Constellation learns with every new document added and suggests new groupings.

NAMING AUTOMATION

If you name a single document, Constellation will identify value patterns to automatically name and group similar documents within logical clusters.

This automation can reduce business process time by 50%.

DATA EXTRACTION

Constellation allows users to extract data points within the documents, making it easy to generate improved business insights.

Constellation can search millions of documents in nanoseconds.

QUALITY ASSURANCE

Constellation's algorithm is constantly testing and looking for new values to ensure your organization has a clear look into your information.

One client is currently experiencing an indexing validation rate of 90%.

DOCUMENT EXPORT

Constellation's export functionality allows for a seamless document migration back to your core document management system regardless of file format.

By adapting to your current system, Constellation saves you additional investments.
